SQUIX
Label printers for industrial applications

The professional **SQUIX** label printers are the further development of the successful A+ printer series. They fit with a wide range of industrial applications. They have been developed with focus on easy and convenient operation and high reliability.

The print mechanics and the chassis are made of high-quality materials and perfectly match in terms of shape and function. A large number of peripherals and software enable customer-specific solutions.

Whether they are operated in stand-alone mode, in a PC application or within a network - the rugged SQUIX printers are always up to the mark. The high-speed processor ensures fast job processing and immediately provides the required label.

- innovative technology
- easy operation
- accurate imprint
- reliable and fast printing
- compact, appealing design
- highest quality standards

Sample applications:

PCB labels
When only little space is available – smallest label size 4 x 4 mm

Type plates
Pin sharp 600 dpi fonts, graphics and barcodes

Cardboard box and pallet labels
up to A5 size

Industrial printers

Material guide
left-aligned

1.1 The slim one

for small labels when little footprint is available; from quarter 1/2018

Label printer		SQUIX 2	
Printable resolution	dpi	300	600
Print speed	up to mm/s	250	150
Print width	up to mm	56.9	54.1

1.2 The universal one

The best-selling industrial device with a large number of accessories.

Label printer		SQUIX 4.3		SQUIX 4	
Printable resolution	dpi	203	300	300	600
Print speed	up to mm/s	250	250	300	150
Print width	up to mm	104	108.4	105.7	105.7

1.3 The wide one

for Odette and UCC labels in applications in logistics

Label printer		SQUIX 6.3	
Printable resolution	dpi	203	300
Print speed	up to mm/s	250	250
Print width	up to mm	168	162.6

Basic versions

for printing on labels and continuous materials that are wound on rolls or fanfold. The material is separated at the jagged tear-off edge. Optionally, it can be cut or externally rewound.

Peel-off versions P

In addition to the basic version the labels can also be dispensed. The label is separated from the carrier material after the printing. It can be removed manually or by an applicator. Delivery includes I/O interface

The extra wide one
for pallet and barrel labels

Label printer		A8+
Printable resolution	dpi	300
Print speed	up to mm/s	150
Print width	up to mm	216

For further information on the A8+ see
www.cab.de/en/a8plus

Details

*Label printer
SQUIX 4 P*

❶ Hinged cover
The two-part cover made of impact-proof plastics folds when it is opened. Therefore, only little footprint is needed. The large panoramic window enables to check the material consumption and to track the full printing process.

❷ Plungers
One plunger is fixed at the inner side. The second one is adjusted that far to the edge of the label until a good print image is ensured.

❸ Rugged metal chassis
made of cast aluminum; basis to assemble all components

❹ Peel-off function
Via the peel-off plate, the label is separated from the carrier material. Accurate imprint and dispense are achieved with the powered rewind assist roller and the pinch roller.

❺ Periphery connection
Additional modules are easy to connect. All peripheral devices are plugged to the printer with two pins and fixed with a screw.

❻ Ribbon holder
Fast and easy exchange of the ribbon is enabled with the three-part tightening axles.

❼ Roll holder
The spring-mounted margin stop with a screw cap enables constant tension during material feed and therefore improves accurate imprint. If rolls with 100 mm core diameter are processed, an adapter is recommended.

❽ Internal rewinder
Peel-off versions allow to rewind labels or carrier materials with or without a cardboard core. The three-part tightening axle provides easy material handling.

❾ Rocker
When printing is started, the spring-mounted rocker with pulleys made of Teflon dampens the tension and therefore improves accurate imprint.

❿ Material guide
It is mounted on the rocker. The stop is adjusted to the edge of the label with the rotary knob.

Label printers M series

**Material guide
centered**

Basic version

Peel-off version P

1.4 **The accurate and versatile one**

for printing on all materials that are wound on rolls or reels or fanfold - especially very small labels or slim continuous materials such as pressed shrink tubes.

As regards the label width, no adjustment of the plungers is needed.

Width-adapted print rollers are provided for slim materials.

Label printer		SQUIX 4.3 M		SQUIX 4 M	
Printable resolution	dpi	203	300	300	600
Print speed	up to mm/s	250	250	300	150
Print width	up to mm	104	108.4	105.7	105.7

Differences compared to a left-aligned material guide

❶ Ribbon holder
Easy insertion of the ribbons is enabled with the three-part tightening axles. A preprinted ruler simplifies the adjustment.

❷ Roll holder
When setting the margin stop, the material roll is automatically centered. If rolls with 100 mm core diameter are processed, an adapter is recommended.

❸ Plungers
Both plungers are fixed for all material widths. No print head settings or adjustments are necessary.

❹ Material guide
The material guide just in front of the print roller provides accurate imprint. The material width is adjusted with a spindle.

Slim print rollers
To achieve accurate imprint with slim materials and ribbons slim print rollers are needed. These prevent from print roller wear, print head contamination and errors during material feed.

Coating: synthetic rubber

centered
with separator

| 1.5 | **The textile printer** |

It is also possible to print on labels or continuous materials that are wound on rolls or reels.

As regards the label width, no adjustment of the plungers is needed.

Width-adapted print rollers are provided for slim materials.

Label printer		SQUIX 4.3 MT	SQUIX 4 MT	
Printable resolution	dpi	300	300	600
Print speed	up to mm/s	250	300	150
Print width	up to mm	108.4	105.7	105.7

Differences compared to a left-aligned material guide

❶ Ribbon holder
Easy insertion of the ribbons is enabled with the three-part tightening axles. A preprinted ruler simplifies the adjustment.

❷ Roll holder
When setting the margin stop, the material roll is automatically centered. If rolls with 100 mm core diameter are processed, an adapter is recommended.

❸ Plungers
Both plungers are fixed for all material widths. No print head settings or adjustments are necessary.

❹ Antistatic brush
Particularly with plastic materials the electrostatic charge is discharged after printing.

❺ Separator
At high heat energy the ribbon can stick with the textile tape. A roller reliably separates the material from the ribbon.

❻ Material guide
The material guide just in front of the print roller provides accurate imprint. The material width is adjusted with a spindle.

Slim print rollers

To achieve accurate imprint with slim materials and ribbons slim print rollers are needed. These prevent from print roller wear, print head contamination and errors during material feed.

the device

RFID write/read module in preparation

| 1.6 | **HF according to ISO/IEC 15693 with 13.56 MHz** |
| 1.7 | **UHF according to ISO/IEC 18000-6C/EPC Class 1 Gen 2** |

If Smart Labels are processed, the integrated RFID chips are tested
and qualified before printing. In case of an error the label is marked.
To achieve good write/read results even with small labels, the
position of the antenna is centered above the transponder.

Print heads

All print heads are freely interchangeable at equal width. They are automatically detected and calibrated by the CPU.

Major data such as running performance, maximum operating temperature and heat energy are directly stored in the print head. The data can be read at the plant.

Print heads for SQUIX 2, SQUIX 4 - 300, 600 dpi
for a sharp-edge print image
for type plates with small fonts, graphics
and material marking with high energy needs

Print heads for SQUIX 4.3, SQUIX 6.3 - 203, 300 dpi
durable, for rough surroundings and thermal direct printing

Print rollers in two types of material

Print rollers DR
Coating: synthetic rubber
They are suited for accurate imprint and provided as standard.

Print rollers DRS
Coating: silicone
They have an extra long service life at a higher imprint tolerance.

Interfaces on the back of the device

1 **Slot for SD memory card**

2 **2 x USB host interfaces** to connect a Service Key, USB memory stick, keyboard, barcode scanner, USB Bluetooth adapter, USB WLAN stick

3 **USB 2.0 Hi-speed device** to connect a PC

4 **Ethernet 10/100 BASE-T**

5 **RS232C interface** 1,200 to 230,400 baud/8 bit

6 3.1 **I/O interface** standard with peel-off devices, accessory to basic devices Labeling is started with a PLC, a sensor or a hand switch. At the same time, status and error messages are issued.

Compliant with IEC/EN 61131-2, type 1+3; all inputs and outputs are galvanically isolated and protected from reverse polarity. In addition, outputs are short circuit protected.

Inputs PNP	Outputs PNP; NPN on request
Start print and apply	Printer/periphery ready
Print first label	Print job available
Reprint	Applicator in initial position
Delete print job	Paper feed ON
Label dispensed	Label in peel-off position
Interrupt labeling	Applicator in apply position
Pause	Pre-warning to end of ribbon
Reset	Common error

Label software cablabel S3

Designing, printing, administrating with cablabel S3

cablabel S3 opens up the full potential of cab devices.

First of all the label must be designed. Only when it comes to printing
it has to be decided whether the label shall be processed on a label printer, a print and apply or marking laser system.

cablabel S3 is of a modular design which makes it adaptable to requirements step by step. To support functions like native JScript programming elements such as the JScript Viewer are embedded as plug-ins. The designer user interface and the JScript code are synchronized in real time. Special functions like the Database Connector or barcode testers can be integrated.
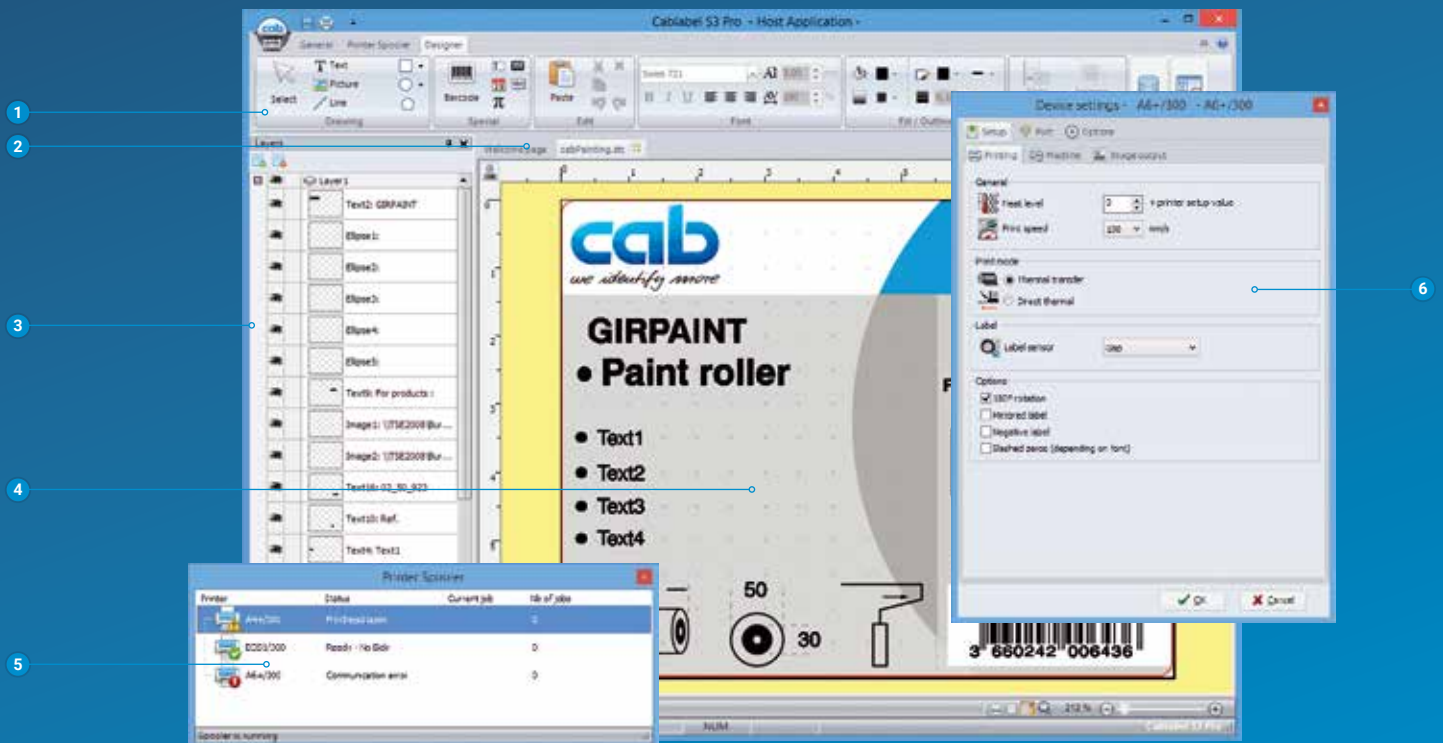

1 Toolbar
   to create different label objects

2 Tabs
   to quickly switch from one running
   label design to another

3 Layers
   to manage different label objects

4 Designer
   Label display in WYSIWYG mode
   to simplify the design

5 Printer spooler
   to monitor all print jobs and printer status

6 Drivers
   to manage settings and the communication with devices

Printing in stand-alone operation

This operating mode is the printer's ability to select and print labels even when it is not connected to a host system.

The label has to be designed with a software such as cablabel S3 or by direct programming with a text editor
on a PC. Label formats, texts, graphics as well as database contents are stored on a memory card,
a USB memory stick or in the internal IFFS memory.

Only variable data are sent to the printer via a keyboard, a barcode scanner,
scales or other systems. With the Database Connector, these data are recalled
from the host and printed.

For further information see
www.cab.de/en/cablabel

Printer control and administration

Printer drivers

To control the printer with a software other than cablabel S3, cab provides drivers in 32 / 64 bit for operating systems starting from Windows Vista, Mac OS 10.6 and Linux with CUPS 1.2.

Windows[1] drivers
cab printer drivers are certified according to WHQL. They ensure optimum stability on the Windows operating system.

Mac OS X[2][3] drivers
cab provides CUPS-based printer drivers for Mac OS X applications.

Linux drivers[3]
The Linux drivers are CUPS-based.

Drivers are offered on the DVD delivered with the printer and for free download at **www.cab.de/en/support**

Printer programming

JScript
To control the printer cab has developed the embedded programming language Jscript. See manual for free download at **www.cab.de/en/programming**

abc Basic Compiler
In addition to JScript and as an integral part of the firmware it allows advanced printer programming before data are sent to printout. For example, external printer languages can be replaced without interfering in the current print job. Also data from other systems such as a scale, a barcode scanner or PLC can be integrated.

Printer integration

Printer Vendor Program
As a partner in SAP's[4] Printer Vendor Program cab has developed a replace method to enable easy control of a cab printer via SAPScript from SAP R/3. Only variable data are sent to the printer by the host. Pictures and fonts that priorly had been stored in the local memory (IFFS, memory card, etc.) are merged.

| Step 1	Step 2	Step 3
Create a label and a replace file with cablabel S3	Use the replace file and replace the variable data in SAPScript	Printout from SAP
Printer administration

Configuration in Intranet and Internet
The HTTP and FTP server integrated in the printer via standard programs like a web browser or FTP clients allows printer control and configuration, firmware updates and memory card administration. Via email or SNMP, the SNMP and SMTP client datagram sends status, warning and error messages to administrators and users. Time and date are synchronized by a time server.

Network Manager in preparation
It is possible to simultaneously manage several printers within the network. Control, configuration, firmware updates, memory card administration, data synchronization and PIN administration are supported from one single location.
Database Connector
Printers connected to a network may directly access data from a central ODBC or OLEDB-ready database and print it on a label. While printing, data can be rewritten to the database.

[1] from the A+ printer series, adapted to SQUIX; provided until the external rewinders ER20x are available

Accessories

Extra equipment

2.2	**Print roller DR4-M25** Material width up to 25 mm Synthetic rubber coating for accurate imprint
	Print roller DR4-M50 Material width up to 50 mm Synthetic rubber coating for accurate imprint
	Print roller DR4-M80 Material width up to 80 mm Synthetic rubber coating for accurate imprint
	Print roller DRS4 Material width up to 120 mm
2.3	**Antistatic brush** Particularly with plastic materials the electrostatic charge is discharged after printing.
2.6	**Adapter 100** for label rolls with 100 mm core diameter and more than 180 mm outside diameter
2.7	**SD memory card** 8 GB
2.8	**USB memory stick** 8 GB
2.9	**USB WLAN stick** 2.4 GHz 802.11b/g/n + 5 GHz 802.11a/n/ac in infrastructure mode with rod antenna for extended reach
2.10	**USB Bluetooth adapter**
2.11	**Barcode tester for linear and 2D barcodes** The readability or content of a horozontally or vertically printed barcode is checked by a camera right after the printing. In case of a faulty code printing is stopped and the label removed. The tester can be used in tear-off mode, peel-off mode or with an external rewinder. For further information see the operator's manual.

Label dispensing

2.12	**Present sensor PS800** for a left-aligned material guide The sensor detects the label in peel-off position. After the label has been removed the next one is automatically printed. Label width from 16 mm Label height from 6 mm Distance to locating edge 7 mm
2.13	**Present sensor PS900** for a left-aligned or centered material guide The moveable sensor is foremost used with very small labels or labels that are shaped according to user specifications. After the label has been removed the next one is automatically printed. Label width from 4 mm Label height from 6 mm Left-aligned: distance to locating edge 12-60 mm centered: position middle centered
2.14	**Present sensor PS1000** for a centered material guide The sensor detects the label in peel-off position. After the label has been removed the next one is automatically printed. Label width from 4 mm Label height from 6 mm Position middle centered
2.15	**Extended peel-off plate DP410** for strong-adhesive labels or labels with a thick carrier material that are hard to remove. Only in conjunction with printing on demand triggered via a display button or control signal. A present sensor cannot be used.
2.16	**Product sensor with reflector** Reflective light barrier to automatically detect a product on the conveyor belt

Interfaces

3.1	**I/O interface** Labeling is started with a PLC, a sensor or a hand switch. At the same time, status and error messages are issued. Standard with peel-off devices, accessory to basic devices
3.2	**I/O interface connector,** SUB-D 25 pin with screw clamps to connect all control signals to the I/O interface
3.3	**Label selection - I/O box** Up to 16 different labels per box can be selected from the memory card by a master control, e.g. PLC. Two boxes can be connected. The I/O box allows simple PLC control processes with four inputs and outputs each via abc programming.

Connecting cable

4.1	**Connecting cable RS232 C** 9/9 pin, length 3 m

Accessories

Cutting, perforating, stacking

Cutter CU
Paper labels, self-adhesive labels, cardboard, textile or plastic materials as well as shrink tubes can be cut.

Cutter tray
to collect up to approx. 50 labels

Adapter kit for

EU4, EU6 with SQUIX

ER4, ER6 and EU4, EU6 with SQUIX

Applicator S1000

7.1
Labeling in real time

The applicator S1000 fixed to a SQUIX provides a cost-effective solution for peel-off printers - in semi-automatic operation or when vertically assembled in production lines. A stroke cylinder applies the label on the product.

1 **Long service life**
Low wear because of a ball-bearing linear guidance

2 **Variable product heights**
The stroke cylinder enables labeling at different heights.
It is available in various stroke lengths.

3 **Compressed air pressure regulation unit**
Micro filters prevent from contamination.
The regulation unit enables a permanent high labeling quality.

4 **High process reliability**
Supporting air, suction air and the stroke speed are all adjustable.
If sensitive products and packagings are processed, the suction force can be reduced to less than 10 N (1 kg). The vacuum holes are purged after every labeling process to avoid contamination.

5 **Label sizes**
Label widths 25 to 176 mm and heights 25 to 200 mm can be applied.

6 **Supporting air** to blow the labels onto the pad

7 **Pad**
The labels are given to the pad and held there by vacuum.
Pad and label are moved by a stroke cylinder to the product.

Pre-dispense button
to check the labeling process. Pushing the button once means that the label is printed and taken over by the applicator. Pushing the button again starts the labeling process.

Applicator S3200

7.6

Labeling in real time

An applicator S3200 fixed to a SQUIX provides a cost-effective solution for peel-off printers - in semi-automatic operation or when vertically assembled in production lines. With the S3200 printed labels are automatically applied on the product. The labels are placed with a rotary cylinder 45° to 95° to the horizontal and applied on the product with a short stroke cylinder. All information on the service life, predispense, compressed air regulation, process reliability and supporting air correspond with the applicator S1000 (see page 18).

Technical data	Applicator S3200
To be used with	SQUIX 2, SQUIX 4.3, SQUIX 4, SQUIX 4.3 M, SQUIX 4 M
Rotary cylinder	45°-95°
Stroke cylinder up to mm	30
Compressed air bar	4.5
Cycle time approx.[1]	20 labels/min

[1] Calculated with label height 40 mm, print speed 100 mm/s

Tamp or blow pads

are manufactured according to the label size.

Technical data	Tamp pad			Blow pad

7.7   7.8

Demand modules

7.9

Demand modules S5104, S5106

to label products in motion on a conveyor belt. A product sensor detects the labeling position. The peel-off process is started and at the same time the next label is printed. The transport speed has to be synchronized with the print speed. A reflective sensor monitors the positioning.

Technical data	Demand module	
	S5104	S5106
To be used with	SQUIX 4.3, SQUIX 4	SQUIX 6.3
Material guide	left-aligned	
Label width mm	25-116	50-176
Label height mm	25-200	
Distance from print line to peel-off plate mm	336-518	
Product surface	flat	
Product height	fixed	
Product during labeling	in motion, speed synchronized with the printer	
Cycle time approx.[1]	60 labels/min	

[1] Calculated with label height 100 mm, print speed 100 mm/s

All-around labeler

7.10

All-around labeler

With the module cylindric objects can be labeled throughout the entire 360° circumference. The product is laid onto the rolls and the labeling process is started with a hand or foot switch.

Technical data		Tamp pad		
		A1021	M1021	
Material guide		left-aligned	left-aligned	centered
To be used with		SQUIX 2	SQUIX 4.3, SQUIX 4 SQUIX 4.3 M, SQUIX 4 M	
Label width	mm	25-63	25-116	25-110
Label height	mm	25-140		
Product diameter	mm	12-40		
Product surface		cylindric		
Product during labeling		in rotary motion		

Recommended with all-around labeling in manual operation:
Applicator S1001-220 with a protective device
To prevent from injuries, the power of the stroke cylinder is reduced and the guides are covered.

Mounting equipment for the SQUIX label printers

8.1

8.2

8.3
Mounting foot

to fix the print and apply system and the product holder

❶ Mounting plate
The print and apply system is assembled on the mounting plate.

❷ Profile
Aluminum square profile, standard lengths 40, 80, 120 mm; other lengths are possible on request

❸ Base plate
to fix the product holder
Standard size 500 x 255 mm

8.4

8.5

Floor stand

It enables fast and flexible printer use in any production line. The labeling position is easily adjustable according to the height and width of the product. Four guide rollers provide mobility of the carriage. The floor stand is aligned with adjustable feet at the place of application.

Technical data		Floor stand
		1600
Total height	mm	1,600
Labeling height	up to mm	1,400
Offset to label centre	mm	230-500
Carriage Width x Height x Depth	mm	600 x 140 x 860

8.5

Printer holder

The label printer is fixed on the mounting plate and quick-locked.

Label printers with special covers or protection chassis

9.1

Printers with an electrically conductive hinged cover for ESD sectors
Available for all printer types

To protect from electrostatic charge, the cover is made of a conductive plastic. The material is very solid due to the carbon fibers and complies with the ESD standard.

If requested, also the entire casing can be designed conductive.

ESD-capable according to DIN EN 61340-5-1:2016

Surface resistance according to DIN IEC 60093 $\leq 10^4$ ohm; charge is reduced from 1,000 V to 100 V in less than two seconds

9.2

Printers with a detectable hinged cover for the food industry
Available for all printer types

The cover is magnetic so that splintered parts can be detected by metal detectors and x-ray inspection systems.

The blue surface serves to distinguish more effectively from food products.

If requested, also the entire casing can be designed detectable.

The material complies with the food regulations such as EU no. 10/2011 and FDA CFR 21 177.2600.

9.3

Stainless steel chassis for the food industry
Available for SQUIX 4 printers

Labels are removed through the front opening.

To replace the materials, the front flap is opened and the printer is pulled out on telescopic rails. The flap is closed for steam jet cleaning.

A heater including temperature and humidity control is an option.

Protection class IP69K according to EN 60529

9.4

Dust protection chassis for dusty surroundings
Available for SQUIX 4 printers

Labels are removed through the front opening.

The fan with the filter provides overpressure and prevents from dust entering the chassis.

Protection class IP52 according to EN 60529

Maintenance

Label sensor
It can be unlocked with finger pressure and pulled out for cleaning.

Print head
Easy exchange in few simple steps. Adjustments or setups are basically not necessary.

Print roller
It can be easily unlocked with a screw for cleaning or replacement.

Assembly tool
ONE tool is provided with the printer to replace all components or to mount periphery.
Services

Well-trained cab service engineers worldwide support in the maintenance and repair of the devices.

Send your printer to a cab service center or a cab service partner selected by us. Your device will be checked and repaired within few workdays. If requested, a loan device will be offered.

You prefer maintenance and repair on-site in your company? Then make an appointment with our Services Department: Phone **+49 721 6626 300**, Email: **service.de@cab.de**

Training

Enhance your know-how on cab devices with regard to an effective use, service and repair.

In Karlsruhe we offer trainings on the handling of the devices, label design, software, printer drivers, programming, database access as well as on how to integrate in networks or superior ERP systems. We gladly send you detailed information on all our current training offers on request.

Individually we offer trainings according to your specific demands - in Karlsruhe or on-site in your company.

cab Product overview

Label printers MACH1, MACH2
in the lower price segment

Label printers MACH 4S
where little space is available

Label printers EOS1
Desktop device for label rolls
up to diameter 152 mm

Label printers EOS4
Desktop device for label rolls
up to diameter 203 mm

Label printers SQUIX 2
Industrial device for print widths
up to 57 mm

Label printers SQUIX 4
Industrial device for print widths
up to 108 mm

Label printers SQUIX 6
Industrial device for print widths
up to 168 mm

Label printers A8+
Industrial device for print widths
up to 216 mm

Label printers XD4T
for double-sided printing

Label printers XC
for two-color printing

Print and apply systems Hermes+
for automation

Print and apply systems Hermes C
for two-color printing and applying

Print modules PX
to be integrated in labeling machines

Labels
made from more than 400 materials

Ribbons
in wax, resin and resin/wax qualities

Label software cablabel S3
Design, print, control

Label dispensers HS, VS
for horizontal or vertical dispense

Labeling heads IXOR
to be integrated in labeling machines

Marking lasers FL+
with output powers 10 to 50 Watt

Laser marking systems XENO 1
for single workpieces and series
